This is a Pageburst digital textbook; the product description may vary from the print textbook. Master content from the textbook with this helpful study tool! Designed to accompany Clayton's Basic Pharmacology for Nurses, 15th Edition, this workbook will assist students in understanding and applying material from each chapter in the text. Includes a question-and-answer Review Sheet for each chapter. Fully updated to reflect the textbook's emphasis on medication safety and preparation for the NCLEX® Examination. Hundreds of review questions, including fill-in-the-blank, matching, and true-false questions. Now includes additional questions on dosage calculation to help you prepare for the NCLEX® Examination and in-class tests.

This is a Pageburst digital textbook; Basic Pharmacology for Nurses, 15th edition, is a contemporary classic nursing pharmacology textbook known for its impeccably accurate drug content and its practical applications of the nursing process. A consistent emphasis on health promotion through medication monitoring and patient education is a hallmark of the book. Introductory units ground the reader in basic principles of pharmacology and medication administration, and subsequent body-system units apply the nursing process to every major disorder and drug class to promote safe medication administration. Provides an overview of relevant pathophysiology with an application of the nursing process in each drug chapter, followed by an application of the nursing process to each applicable drug class. Covers the pharmacology of all major classes of drugs, emphasizing side effects to expect, side effects to report, drug interactions, and more. Emphasizes patient education and health promotion with easy-to-recognize Patient Education and Health Promotion headings and reproducible Patient Self-Assessment forms. UNIQUE! Each chapter concludes with a 3-part Medication Safety Review that highlights the importance of safe drug administration and provides review and application of key chapter content related to medication safety. Provides need-to-know coverage of herbal therapies and dietary supplements with an Herbal and Dietary Supplement Therapy chapter, plus Herbal Interactions boxes throughout the chapters. UNIQUE! New coverage of drugs for weight management are included in the expanded Nutrition and Weight Management chapter (Chapter 49). Increased emphasis on medication safety prepares nurses to practice more safely in a clinical environment that is both more pressured and more focused than ever on reducing drug errors. The increased emphasis includes Chapter 7: Principles of Medication Administration, do-not-confuse icons, and an icon to signal ISMP's "high alert" drugs. As the focus on pharmacology on the NCLEX continues to increase, chapter-ending Medication Safety Review sections have been refocused into three types of application-level questions, including Dosage Calculation Review Questions, Review Questions for the NCLEX Examination, and Critical Thinking Activities. Evidence-based practice content is now highlighted with a distinctive icon in the margins. The antimicrobial chapter has been broken into three smaller chapters (Antimicrobics, Antifungals, Antivirals) resulting in a less overwhelming reading on this topic. Updated coverage of the most recent FDA approvals, withdrawals, and therapeutic uses provide impeccably accurate and current content to ensure safe drug therapy. Updated and streamlined coverage of nursing care with a stronger focus on the need-to-know material helps students focus on the most current, need-to-know content.

"The book is an easy to follow introductory text ... It uses uncomplicated language and case studies and questions that provide students with concrete examples, relating to real life situations, upon which they can develop their pharmacological knowledge and understanding. Clinical tips are clear and illustrate the key points that should be considered by the nurse in the real care giving environment, including acknowledgement of the increasing usage of complementary medicine." David Armstrong, Senior Lecturer, Northumbria University, UK "This new book explains specific common disease processes including anatomy and physiology as well as the medications/drugs which may be used... It will be essential reading for pre-registration nursing students who want to build on their existing knowledge." Margaret Diller, Lecturer, University of Salford, UK This user-friendly guide follows on from the bestselling book Essentials of Pharmacology for Nurses, and is written for pre-registration nursing students looking for an accessible guide to drug groups that goes beyond the essentials. It is simple and accessible and examines the next logical set of drug groups that nurses need to know. These include: Cardiovascular drugs Gastrointestinal drugs Drugs used in cancer Drugs used in nausea and vomiting Anaesthesia Fluids Topical medicines Written by authors with extensive academic and practice experience, this book will build on your existing knowledge of anatomy and physiology to help give a holistic understanding of body systems. It features: Multiple choice questions in every chapter and calculation tests Unique sections on ' Complementary Therapies and Pharmacology ' and ' Medicines Used on the Skin ' Clinical tip boxes linking pharmacology to the role of the nurse or midwife Patient scenarios from a range of different clinical settings

"An essential purchase for all nursing students ... It is easy to read, clearly written and follows a logical path through a wide scope of subjects relating to pharmacology in nursing ... This book will enable the student reader to develop the necessary knowledge and understanding to be a competent, safe and caring nurse." Keith Booles, Senior Nurse Lecturer/Module Leader, Adult Nursing Practice, Faculty of Health, Staffordshire University, UK "This book is excellent in terms of how it explains complex ideas in simple terms ... It's a practical guide to drugs used in nursing, telling you drug types, effects on the body and side effects the client might encounter. A truly invaluable book for students and nurses alike." Carol Molly Casey, Student Nurse, University of Wolverhampton, UK "This second edition ... provides excellent case studies that [make the subject] come alive by engaging with and applying the theory to realistic patient scenarios along with the very practical 'clinical tips'. This is an excellent introductory text both for pre-registration nurses to prepare them for their today's modern nursing roles and also for those post registration nurses embarking on prescribing courses ... The format is easy to read and breaks down barriers encouraging the reader to delve into this exciting subject." Karen Ford, Programme leader for Non-Medical Prescribing, De Montfort University, UK "This book is easy to read with clear explanations throughout and suitable for all branches of nurse education. Each chapter has clear learning objectives, clinical tips to aid thinking and supported with case studies and multiple choice questions ... There are clear links to clinical practice throughout. I would recommend this as a core book to all nursing students undertaking nurse education." Lesley Drayton, Senior Lecturer, Anglia Ruskin University, UK This ideal starter text for student nurses aims to make pharmacology less intimidating and focuses on the knowledge needed at pre-registration level in order to practice as a newly qualified nurse, in a variety of different settings. The book does not assume previous knowledge of pharmacology, or a level of confidence with maths and drugs calculations. Noted for its clear layout and jargon-free language, this updated edition introduces pharmacology and calculations in a friendly, informative way. This new edition has been carefully expanded to include more detail on adverse drug reactions and interactions, antimicrobials, drugs used in chronic conditions and drugs used in mental health and the text has been fully updated to include the latest NICE guidelines. It contains: 90 calculations and 100 multiple choice questions to help perfect your skills and assess learning Clinical tip boxes linking pharmacology to the role of the nurse Patient scenarios from a range of different clinical settings References to key guidelines and clinical tests The book emphasises application of pharmacological principles to all areas of practice including drug action, interaction and side effects.

This ideal starter text for student nurses makes pharmacology less intimidating by focusing on the knowledge needed at pre-registration level in order to practice as a newly qualified nurse. Noted for its clear layout and jargon-free language, this updated edition introduces pharmacology in a friendly, informative way. The book does not assume previous knowledge of pharmacology, or a level of confidence with maths and drugs calculations. This new edition has been carefully expanded to include a new chapter introducing drug calculations and measurements as well as more detail on drugs used in chronic conditions, as well as more on pharmacology for the older patient and for other specific groups such as children, pregnant women or those with minor illness. More case scenarios have been added to encourage nurses to apply knowledge to a range of different people with a range of needs. The book contains: 90 calculations and 100 multiple choice questions to help perfect your skills and assess learning Clinical tip boxes linking pharmacology to the role of the nurse 35 patient scenarios across a range of clinical settings References to key clinical tests and the latest NICE guidelines The book emphasises application of pharmacological principles to all areas of practice including drug action, interaction and side effects, and is useful to all students of pharmacology whether as part of a 3 year course, post-qualifying course, top-up course or standalone module. "This latest edition of a key textbook on pharmacology for nurses has moved forward from previous editions by becoming stronger by the inclusion of a greater scope of material so maintaining its place as an essential pharmacology book for current and forthcoming nursing students in all clinical practice fields to give them a strong evidence base for their studies and clinical practice. The addition of a chapter on drug calculations is an essential step forward in this edition for all students as this is a key component within all current nursing degree programmes. The continued use of case studies and clinical tips makes learning fun both as an individual but also in small learning groups of students. It follows a clear pathway for learning: it is easy to read, is clearly written and shows the importance of aspects of pharmacology within the work of a nurse." Keith Booles, Senior Nurse Lecturer/Module Leader, Faculty of Health Sciences, Staffordshire University, UK "With the ever evolving role of nursing it is essential, for safe practice, that all nurses have knowledge of pharmacology. This latest edition of essentials of pharmacology for nurses offers just that. This is a well presented book with logical, thought out chapters that enable the reader to learn at their own pace. Although aimed at undergraduate nurses, I feel that this is a good base to build on pharmacology knowledge, not only for undergraduate nurses but also trained nurses." Sharon Riverol NHS West Cheshire CCG, UK

Medicine management is an important and demanding aspect of nursing practice. It requires both clinical knowledge and the use of professional judgement. This accessible book is designed to help both practising and student nurses prepare to deal with the challenges of medicine management. It covers the principles and skills involved in a range of common medicine management scenarios and will help nursing students integrate their knowledge of physiology, pathophysiology, pharmacology and nursing care. This handy book: Is based on 21 practical case studies, which help you learn about effective medicine management and test your understanding of essential drug groups. Helps you gain confidence in your knowledge of pharmacology Highlights the nurse's role in identifying the therapeutic and adverse effects of medicines on a patient Part of the Case Book series, Medicine Management for Nurses Case Book offers a unique way of relating theory to practice. The cases are ideal for preparing for exams, tests and working in practice, as each one includes self-test questions and answers. Whether you are preparing to qualify or studying medicine management after qualification, this case book is the ideal practical tool for you. Contributors: Diane Blundell, Abe Ginoure, Joy Parkes, Ruth Sadik, Pat Talbot, Janine Upton, Traci Whitfield, Christine Whitney-Cooper, Debbie Wyatt. "The book offers a unique and engaging approach to an important subject that most students find daunting. Realistic case scenarios are used as a catalyst to introduce information and concepts that underpin practice. The presentation style supports the active participation of the student with the inclusion of questions at the beginning of each topic offering a platform to explore key areas whilst referring to the scenario. I highly recommend it to pre-registered student nurses." Kris Paget, Senior Lecturer, Faculty of Health, Social Work and Education, Kingston University, UK "This collection of case studies provides a unique and user friendly guide to commonly seen pharmacological therapies and treatment options across the lifespan. The case studies have been carefully selected to provide the diverse care needs of complex disease processes in a person centred way. Each case study is relevant to the role of the Nurse and will provide essential and core information whether nurses are working in either a medical or surgical clinical setting. Government Health Care Directives provide the essential clinical evidence based theory necessary to promote medicine adherence and each chapter provides the relevant pathophysiology which is essential to underpin the safe administration of medication therapies. The role of the nurse in medicine management with respect to patient education and the professional responsibilities of monitoring and evaluating complex medication therapies is presented in each case study. This provides an holistic approach to the care of patients receiving complex medication therapies." Barry Ricketts, Senior Lecturer, Adult Nursing, Oxford Brookes University, UK
