"The two reports published here

contain elements which contribute substantially to this broader spectrum of Southwestern cultural change. While primarily descriptive in nature, these two site reports, one from the western Kayenta area and one from the margin of the Mesa Verde area and the eastern Kayenta, suggest that the changes which occurred in the more centralized portions of these regions were directly related to what happened on the margins. That, while the site densities and population aggregates may not have been as high, the same factors affected these marginal areas. That conclusion could be expected, but what may not be expected is the differential response which

appears to have occurred. After reading these two reports, it appears that it may be possible to discern elements of change in these fringe areas that, once defined, will provide new insight into what happened and why and in what are presently the better known areas of the Southwest. These two papers are important, in sum, not only because they are reports of work in poorly known areas, but because they do provide analyses of fringe areas, they help us to understand the Southwest generally"--From preliminary introduction.

The volume of waste produced by human activity continues to grow, but steps are being taken to mitigate this problem by viewing waste as a resource. Recovering a proportion of waste for re-use immediately reduces the volume of landfill. Furthermore, the scarcity of some elements (such as phosphorous and the rare-earth metals) increases the need for their recovery from waste streams. This volume of *Issues in Environmental Science and Technology* examines the potential resource available from several waste streams, both domestic and industrial. Opportunities for exploiting waste are discussed, along with their environmental and economic

considerations. Landfill remains an unavoidable solution in some circumstances, and the current situation regarding this is also presented. Other chapters focus on mine waste, the recovery of fertilisers, and the growing potential for compost. In keeping with the Issues series, this volume is written with a broad audience in mind. University students and active researches in the field will appreciate the latest research and discussion, while policy makers and members of NGOs will benefit from the wealth of information presented.

New England archaeology has not always been everyone's cup of tea; only late in the Golden of nineteenth-century archaeology,

as archaeology's focus turned westward, did a few pioneers look northward as well, causing a brief flurry of investigation and excavation. Between 1892 and 1894, Charles C. Willoughby did some exemplary excavations at three small burial sites in Bucksport, Orland, and Ellsworth, Maine, and made some models of that activity for exhibition at the Chicago World's Fair. These activities were encouraged by E Putnam, director of the Harvard Peabody Museum and head of anthropology at the "Columbian" Exposition. Even earlier, another director of the Peabody, Jeffries Wyman, spawned some real interest in the shellheaps of the Maine coast, but that did not last very long. Twentieth-century New
