history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Get the Summary of Wim Hof and Elissa Epel's The Wim Hof Method Sample Key Takeaways from Chapters 1-2#1Wim Hof's life started dangerously, from its first moments. He was a twin, but the doctors did not know his mother was carrying two children, so during childbirth, they only delivered his brother and left him in his mother's womb.#2His mother knew there was something wrong, but the doctors dismissed her concerns. Finally, after her incessant protests, they discovered another baby. He was purple when they took him out, breathless, and cold. But he believes his mother's love brought him to life.#3He believes that, as a result of his unusual beginning, he's always had a yearning for something else, for something more, something deeper, mystical - something strange.
