Caves are also important sources of mineral deposits. Speleologists might work to mine these resources or examine how they might have come to form there. Speleologists might also work as cartographers, developing maps for caves used for recreational or tourist use - devise the safest route through a cave, or come up with ways to ensure they are safe. They work mostly in caves but will spend their time between offices and labs and the cave systems that they study.

How to Become a Speleologist | EnvironmentalScience.org

A Scientist, a Speleologist is the professional equivalent of a Caver or Spelunker, which are two names given to people who explore caves for fun. Unlike those who visit caves recreationally, however — for thrills, adventure, or curiosity — a Speleologist ' s relationship with caves is strictly business, involving serious scientific study.

Careers Speleologist Study Of Caves

Speleologist. Speleology, or the study of caves, is an interdisciplinary science. Speleologists need to have a broad knowledge of hydrology, chemistry, survey techniques, geology, biology and climatology, in addition to being specialized in speleology. In the early days, speleologists educated themselves, even though their jobs had absolutely nothing to do with natural resources.
