This volume provides a unified framework for the analysis of short- and medium-run macroeconomics. It develops a core New Keynesian macro model based on imperfect competition and nominal rigidities and shows how this compares with alternatives.

Carlin and Soskice integrate the financial system with a model of the macro-economy. In doing this, they take account of the gaps in the mainstream model exposed by the financial crisis and the Eurozone crisis. This equips the reader with a realistic modelling framework to analyse the economy both in crisis times and in periods of stability.

This book aims to showcase and advance recent debates over the extent to which undergraduate macroeconomics teaching models adequately reflect the latest developments in the field. It contains 16 essays on topics including the 3-equation New Consensus model, extensions and alternatives to this model, and endogenous money and

This intermediate level textbook concentrates on macroeconomic analysis and is one of the first to focus on imperfectly competitive labour and product markets. The authors present a 'new Keynesian' treatment of macroeconomics. Its key characteristic is the use of wage bargaining and price-setting under imperfect competition, making product and labour market assumptions closer to the real world. These features are fully integrated in both closed and open economy analysis. The book provides access both to the important applied work on unemployment, inflation, and external balances, and to the journal literature on major questions of economic policy and performance, especially in Western Europe, available to undergraduates and non-specialists for the first time.

This book retraces the history of macroeconomics from Keynes's General Theory to the present. Central to it is the contrast between a Keynesian era and a Lucasian - or dynamic stochastic general equilibrium (DSGE) - era, each ruled by distinct methodological standards. In the Keynesian era, the book studies the following theories: Keynesian macroeconomics, monetarism, disequilibrium macro (Patinkin, Leijonhufvud, and Clower) non-Walrasian equilibrium models, and first-generation new Keynesian models. Three stages are identified in the DSGE era: new classical macro (Lucas), RBC modelling, and second-generation new Keynesian modeling. The book also examines a few selected works aimed at presenting alternatives to Lucasian macro. While not eschewing analytical content, Michel De Vroey focuses on substantive assessments, and the models studied are presented in a pedagogical and vivid yet critical way.

bring students a book and learning system that complements and enhances CORE's open-access online e-book. The Economy is a new approach that integrates recent developments in economics including contract theory, strategic interaction, behavioural economics and financial instability. It challenges students to address inequality, climate change, economic instability, wealth creation and innovation and other problems. It has been adopted as the standard principles course at University College London, Sciences Po Paris and the Toulouse School of Economics. A new economics for the principles course The Economy begins with social interactions using elementary game theory and institutions modelled as rules of the game. This provides the basis for a modern treatment of markets including price-making as well as price-taking, the exercise of power, and the importance of social norms and adjustment to disequilibria. Introducing labour and credit markets with incomplete contracts allows a consistent treatment of aggregate employment and fluctuations without the need for ad hoc sticky price and wage assumptions. Banks create money by extending credit and a central bank seeks to implement a target inflation rate. Growth and instability are illustrated from the Great Depression, through the post-war golden age of capitalism through to the financial crisis and ensuing uncertainties. Students acquire an understanding of the past and current evolution of the economy in its social and environmental context, equipping them to marshal evidence and articulate positions about contemporary policy issues.
