Construction Materials Methods And Techniques

One simple step is to choose materials or suppliers that require little packaging. Using components made from recycled materials is another easy way to minimize construction waste. Another opportunity for waste reduction is to train employees to separate and categorize waste as it's generated, laying the groundwork for later recycling efforts.

Construction - Methods and Practices

Rammed-earth construction may also reduce the ecological impacts of deforestation and the toxicity of artificial materials associated with conventional construction techniques. Although it has low greenhouse gas emissions in theory, transportation and the production of cement can add significantly to the overall emissions of modern rammed earth construction.
