Michael V. Cook BSc, MSc, CEng, FRAeS, CMath, FIMA, in Flight Dynamics Principles (Third Edition), 2013. 3.4.2 Directional static stability. Directional static stability is concerned with the ability of the aircraft to yaw or weathercock into wind in order to maintain directional equilibrium. Since all aircraft are required to fly with zero sideslip in the yaw sense, positive directional stability is designed in from the outset.

Michael V. Cook BSc, MSc, CEng, FRAeS, CMath, FIMA, in Flight Dynamics Principles (Third Edition), 2013. 9.4.1 Interpretation of conditional instability. Case 1: When $R < 0$ and $E > 0$. Observation of the signs of the coefficients in the first column of array (9.17) indicates that two roots of the characteristic equation (9.16) have positive real parts. For longitudinal motion this implies a pair of complex roots; in most cases this means an unstable phugoid mode since its stability margin is ...
