Urodynamics Test - Urology Conditions - London Urology

After having urodynamic tests there is a small possibility that you may develop a urinary tract infection. This is caused by putting the very thin tubes (catheters) into your bladder during the test. To help reduce the likelihood of developing an infection after the test, your hospital may advise you to:

Urodynamic Tests | Patient

If you have an enlarged prostate gland, it can cause symptoms of urinary incontinence, such as a frequent need to urinate. Dipstick test. If the GP thinks your symptoms may be caused by a urinary tract infection (UTI), a sample of your urine may be tested for bacteria. A small chemically treated stick is dipped into your urine sample.

Urinary incontinence - Diagnosis - NHS

Why am I having a urodynamics test? A urodynamics test looks at the way your bladder is working and helps us to investigate the cause of your urinary (waterworks) symptoms. The results can help us to decide the best form of treatment for you. It can be useful: □ when an operation is being considered □ when previous treatments, such as medication, have not improved your symptoms.
