Importance of Atmospheric Chemistry • Atmosphere is very thin and fragile! - Earth diameter = 12,740 km - Earth mass  $\sim 6 \cdot 10^{24}$ kg - Atmospheric mass  $\sim 5.1 \cdot 10^{18}$ kg - 99% of atmospheric mass below  $\sim 50$  km - Solve in class: order of magnitude of mass of the oceans? Mass of entire human population?

## Lecture 1: Introduction to Atmospheric Chemistry

The objective of atmospheric chemistry is to understand the factors that control the concentrations of chemical species in the atmosphere. In this book we will use three principal measures of atmospheric composition: mixing ratio, number density, and partial pressure. As we will see, each measure has its own applications.

Introduction to Atmospheric Chemistry (Princeton University Press, 1999). They are arranged following the different chapters of the book. In recent years I have added to my course lectures a chapter 14, 'Aerosol Chemistry' and a chapter 15, 'Mercury in the Environment'. I have included problems to support these chapters.

From the phase diagram we find that the stable phase of water is liquid. The fact that the atmosphere contains water vapor simply means that it is not in equilibrium. Under these conditions water will condense to produce a liquid phase, and  $P_{H_2O}$  will decrease until the gas-liquid equilibrium line is reached.
