DRV5053: Low frequency noise in linear Hall effect sensors. I am aiming to use a Hall effect sensor to measure slow variations of permanent magnets due to temperature. Therefore the sensor should not compensate for temperature fluctuations of the magnet such as the DRV5056 does. I have been testing two linear ratiometric hall effect sensors (among which DRV5056), but I keep suffering from low frequency noise from the Hall sensor.

The SS39ET/SS49E/SS59ET Series Low-cost Linear Hall-effect Sensor ICs are small, versatile devices that are operated by the magnetic field from a permanent magnet or an electromagnet. The linear sourcing output voltage is set by the supply voltage and varies in proportion to the strength of the magnetic field. The low voltage capability (as low as 2.7 Vdc) and reduced current consumption of only 6 mA (typical at 5 Vdc) help make this product energy efficient.
