This book gathers the best articles presented by researchers and industrial experts at the International Conference on "Innovative Design and Development Practices in Aerospace and Automotive Engineering (I-DAD 2018)". The papers discuss new design concepts, analysis and manufacturing technologies, with an emphasis on achieving improved performance by downsizing; improving the weight-to-strength ratio, fuel efficiency, and operational capability at room and elevated temperatures; reducing wear and tear; and addressing NVH aspects, while balancing the challenges of Euro IV/Barat Stage IV emission norms and beyond, greenhouse effects, and recyclable materials. The innovative methods discussed here offer valuable reference material for educational and research organizations, as well as industry, encouraging them to pursue challenging projects of mutual interest.

Breeding Oilseed Crops for Sustainable Production: Opportunities and Constraints presents key insights into accelerating the breeding of sustainable and superior varieties. The book explores the genetic engineering/biotechnology that has played a vital role in transforming economically important traits from distant/wild species to cultivated varieties, enhancing the quality and quantity of oil and seed yield production. Integrated nutrient management, efficient water management, and forecasting models for pests diseases outbreaks and integrated pest and pest management have also added new dimensions in breeding for sustainable production. With the rise in demand, the scientific community has responded positively by directing a greater amount of research towards sustainable production both for edible and industrial uses. Covering the latest information on various major world oil crops including rapeseed mustard, sunflower, groundnut, sesame, oilpalm, cotton, linseed/flax, castor and olive, this book brings the latest advances together in a single volume for researchers and advanced level students. Describes various methods and systems to achieve sustainable production in all major oilseed crops Addresses breeding, biology and utilization aspects simultaneously including those species whose information is not available elsewhere Includes information on modern biotechnological and molecular techniques and production technologies Relevant for international government, industrial and academic programs in research and development

Arthropods are invertebrates that constitute over 90% of the animal kingdom, and their bio-ecology is closely linked with global functioning and survival. Arthropods play an important role in maintaining the health of ecosystems, provide livelihoods and nutrition to human communities, and are important indicators of environmental change. Yet the population trends of several arthropods species show them to be in decline. Arthropods constitute a dominant group with 1.2 million species influencing earth's biodiversity. Among arthropods, insects are predominant, with ca. 1 million species and having evolved some 350 million years ago. Arthropods are closely associated with living and non-living entities alike, making the ecosystem services they provide crucially important. In order to be effective, plans for the conservation of arthropods and ecosystems should include a mixture of strategies like protecting key habitats and genomic studies to formulate relevant policies for in situ and ex situ conservation. This two-volume book focuses on capturing the essentials of arthropod inventories, biology, and conservation. Further, it seeks to identify the mechanisms by which arthropod populations can be sustained in terrestrial and aquatic ecosystems, and by means of which certain problematic species be managed without producing harmful environmental side-effects. This edited compilation includes chapters contributed by over 80 biologists on a wide range of topics embracing the diversity, distribution, utility and conservation of arthropods and select groups of insect taxa. More importantly, it describes in detail the mechanisms of sustaining arthropod ecosystems, services and populations. It addresses the contribution of modern biological tools such as molecular and genetic techniques regulating gene expression, as well as conventional, indigenous practices in arthropod conservation. The contributors reiterate the importance of documenting and understanding the biology of arthropods from a holistic perspective before addressing conservation issues at large. This book offers a valuable resource for all zoologists, entomologists, ecologists, conservation biologists, policy makers, teachers and students interested in the conservation of biological resources.

Anthology of erotic stories; includes translation from multiple Indic languages.

Beginning with Timur, Sultan Ghazni who invaded India seventeen times at the head of a large army, plundering the country of its great wealth, to the last Mughal Emperor Bahadur Shah, banished from the country by the British - details and descriptions of every incident and each king astonish and exhilarate us. The approach is direct, simple and unambiguous. From Timur to Bahadur Shah it is one engaging account. The book should find a place in every household, as an authentic account of ourselves. A flawless portrait. -THE HINDU Madhan while explaining historical events uses modern similes... In spite of being a cartoonist in his previous avatar Madhan did not caricature the Moghul Emperors and their subjects. I am so pleased he did not sit on judgement as a south Indian non-Muslim writer. -KAMAL HAASAN

The Tamil Brahmins were a traditional, mainly rural, high-caste elite who have been transformed into a modern, urban, middle-class community since the late nineteenth century. Many Tamil Brahmins today are in professional and managerial occupations, such as engineering and information technology; most of them live in Chennai and other Tamilnadu towns, but others have migrated to the rest of India and overseas. This book, which is mainly based on the authors ethnographic research, describes and analyses this transformation. It is also a study of how and why the Tamil Brahmins privileged status within a hierarchical society has been perpetuated in the face of both a strong anti-Brahman movement in Tamilnadu, and a series of wider social, cultural, economic, political, and ideological changes that might have been expected to undermine their position completely. The major topics discussed include Brahman rural society, urban migration and urban ways of life, education and employment, the position of women, and religion and culture. The Tamil Brahmins class position, including the internal division into the upper- and lower-middle classes, and the process of class reproduction, are examined closely to analyze the congruence between Tamil Brahmanhood and middle classness, which as comparison with other Brahman and non-Brahman groups shows is highly unusual in contemporary India."

Traces the fall and the final realization of the illustrious King Prathiban Chola's dream of an all powerful Chola empire and the exploits of the Pallava king, Narsimhan Varman.

The aim of this book is to present new computational techniques and methodologies for the analysis of the clinical, epidemiological and public health aspects of SARS-CoV-2 and COVID-19 pandemic. The book presents the use of soft computing techniques such as machine learning algorithms for analysis of the epidemiological aspects of the SARS-CoV-2. This book clearly explains novel computational image processing algorithms for the detection of COVID-19 lesions in lung CT and X-ray images. It explores various computational methods for computerized analysis of the SARS-CoV-2 infection including severity assessment. The book provides a detailed description of the algorithms which can potentially aid in mass screening of SARS-CoV-2 infected cases. Finally the book also explains the conventional epidemiological models and machine learning techniques for the prediction of the course of the COVID-19 epidemic. It also provides real life examples through case studies. The book is intended for biomedical engineers, mathematicians, postgraduate students; researchers; medical scientists working on identifying and tracking infectious diseases.

According to Gandhiji, ideal society is a Stateless democracy, the state of enlightened anarchy where social life has become so perfect that it is self-regulated. "In the ideal state, there is no political power because there is no State." Gandhiji believed that perfect realization of an ideal is impossible. However "the ideal is like Euclid's line that is one without breadth but no one has so far been able to draw it and never will.Village Swaraj as conceived by Gandhiji is thus a genuine and virile democracy which offers a potent cure for many of the political ills that mark the present political systems. Such a pattern of decentralized genuine democracy will have a message for the whole of humanity.
