As the first nineteenth century woman to successfully campaign for women's rights legislation, Caroline Norton has been comparatively neglected and under-researched. There is, however, a current and growing interest in her life and work. This is a new three volume collection of the correspondence of Caroline Norton. The collection includes over 750 of her letters and also features an introduction by the editors, contextualising and embedding Caroline's literary and political achievements within the narrative of her letters.

Slavery, Geography and Empire in Nineteenth-Century Marine Landscapes of Montreal and Jamaica is among the first Slavery Studies books - and the first in Art History - to juxtapose temperate and tropical slavery. Charmaine A. Nelson explores the central role of geography and its racialized representation as landscape art in imperial conquest. One could easily assume that nineteenth-century Montreal and Jamaica were worlds apart, but through her astute examination of marine landscape art, the author re-connects these two significant British island colonies, sites of colonial ports with profound economic and military value. Through an analysis of prints, illustrated travel books, and maps, the author exposes the fallacy of their disconnection, arguing instead that the separation of these colonies was a retroactive fabrication designed in part to rid Canada of its deeply colonial history as an integral part of Britain's global trading network which enriched the motherland through extensive trade in crops produced by enslaved workers on tropical plantations. The first study to explore James Hakewill's Jamaican landscapes and William Clark's Antiguan genre studies in depth, it also examines the Montreal landscapes of artists including Thomas Davies, Robert Sproule, George Henriot and James Duncan. Breaking new ground, Nelson reveals how gender and race mediated the aesthetic and scientific access of such - mainly white, male - artists. She analyzes this moment of deep political crisis for British slave owners (between the end of the slave trade in 1807 and complete abolition in 1833) who employed visual culture to imagine spaces free of conflict and to alleviate their pervasive anxiety about slave resistance. Nelson explores how vision and cartographic knowledge translated into authority, which allowed colonizers to 'civilize' the terrains of the so-called New World, while belying the oppression of slavery and indigenous displacement.

Scholars of Victorian literature and culture, as well as readers interested in children's literature, childhood studies, and gender studies, will welcome this excellent work from a major figure in the field.

A revelatory global history shows how cheap American grain toppled the world's largest empires To understand the rise and fall of empires, we must follow the paths traveled by grain—along rivers, between ports, and across seas. In Oceans of Grain, historian Scott Reynolds Nelson reveals how the struggle to dominate these routes transformed the balance of world power. Early in the nineteenth century, imperial Russia fed much of Europe through the booming port of Odessa. But following the US Civil War, tons of American wheat began to flood across the Atlantic, and food prices plummeted. This cheap foreign grain spurred the rise of Germany and Italy, the decline of the Habsburgs and the Ottomans, and the European scramble for empire. It was a crucial factor in the outbreak of the First World War and the Russian Revolution. A powerful new interpretation, Oceans of Grain shows that amid the great powers' rivalries, there was no greater power than control of grain.

This well-accepted book, now stands in its second edition, is a time-honoured revision and extension of the previous edition. It describes different kinds of innate and learned behaviours, animal communications, defensive behaviours such as camouflage and mimicry with suitable illustrations. The book incorporates the introductory concepts of biomimicry in an attractive manner. Further, it discusses biorhythms, migration in fish and birds, in addition to evolution and physiological basis of migration. Finally, it provides discussions on behavioural ecology in the context of conservation biology, and human behaviour. The book presents the basic principles of animal behaviour with the aid of carefully selected examples from both the recent and classic literature along with an emphasis on readability. In the present edition, topics like eusociality and behavioural theories have been incorporated.
