This second edition provides a comprehensive view of consolidated and innovative concepts, in terms of both diagnosis and treatment. Written by leading international physicians and investigators, this book emphasizes the necessity of combining local and systemic treatments to achieve the objective of yielding higher cure rates and lower toxicities. Heavily updated from the previous edition, it highlights new surgery and radiotherapy techniques, disease awareness, patient quality of life, and comprehensive management. Head-and-neck cancers are a complex clinical entity and their response to treatment is also known to vary markedly in function of host-related factors. Notwithstanding the impressive progresses observed in the field of imaging, head and neck cancers are often diagnosed at a late stage and the presence of locally advanced disease in a significant number of patients implies the use of aggressive treatments in order to both ensure local disease control and reduce distant metastasis risks. In comparison with the first edition, Head and Neck Cancer, Second Edition provides a detailed update of innovative concepts in chemo- and bio-radiation, viral infection impact on tumor growth and response to treatment, and impact of tumor- and host-related factors on treatment outcome.

This book covers some well-known and some unexplored pathological aspects of management of peritoneal metastases and should be read by both surgeons and pathologists involved in the management of peritoneal surface malignancies. The evaluation of cytoreductive surgery specimens is explored for the prognostic information it can provide and recommendations for evaluation of such specimens are provided. The pathways and patterns of peritoneal dissemination and their clinical implications on the extent of surgery performed and other aspects of management are discussed for some common peritoneal tumours. The exploratory studies presented here provide a new perspective on the surgical resection of peritoneal metastases. Other important aspects of pathological evaluation like pathological response to chemotherapy, diagnosis and classification of rare peritoneal tumors have also been covered in different chapters. Keeping in sync with the progress in molecular oncology, the role of molecular oncology in the current and future management of peritoneal metastases is addressed for different tumors.

When Brazil was honored at the Frankfurt Book Fair in 2013, the Brazilian author Luiz Ruffato opened the event with a provocative speech, claiming that literature, through its pervasive depiction and discussion of ‘otherness,’ has the potential to provoke ethical transformation. This book uses Ruffato’s speech as a starting point for the discussion of contemporary Brazilian literature that stands in contrast to the repetition of social and cultural clichés. By illuminating the relevance of humanities and literature as a catalyst for rethinking Brazil, the book offers a resistance to the official discourses that have worked for so long to conceal social tensions, injustices, and secular inequities in Brazilian society. In doing so, it situates Brazilian literature away from the exotic and peripheral spectrum, and closer to a universal and more relevant ethical discussion for readers from all parts of the world. The volume brings together fresh contributions on both canonical contemporary authors such as Graciliano Ramos, Rubem Fonseca, and Dalton Trevisan, and traditionally silenced writing subjects such as Afro-Brazilian female authors. Essays deal with specific contemporary literary and social issues while engaging with historically constitutive phenomena in Brazil, including authoritarianism, violence, and the systematic violation of human rights. The exploration of diverse literary genres -- from novels to graphic novels, from poetry to?crônicas -- and engagement with postcolonial studies, gender studies, queer studies, cultural studies, Brazilian studies, South American literature, and world literature carves new space for the emergence of an original?Brazilian thought.

Drug Utilization Research (DUR) is an eclectic scientific discipline, integrating descriptive and analytical methods for the quantification, understanding and evaluation of the processes of prescribing, dispensing and consumption of medicines and for the testing of interventions to enhance the quality of these processes. The discipline is closely related and linked mainly to the broader field of pharmacoepidemiology, but also to health outcomes research, pharmacovigilance and health economics. Drug Utilization Research is a unique, practical guide to the assessment and evaluation of prescribing practices and to interventions to improve the use of medicines in populations. Edited by an international expert team from the International Society for Pharmacoepidemiology (ISPE), DUR is the only title to cover both the methodology and applications of drug utilization research and covers areas such as health policy, specific populations, therapeutics and adherence.
