The nuclear force (or nucleon – nucleon interaction or residual strong force) is a force that acts between the protons and neutrons of atoms. Neutrons and protons, both nucleons, are affected by the nuclear force almost identically. Since protons have charge $+1 e$, they experience an electric force that tends to push them apart, but at short range the attractive nuclear force is strong enough to ...

Nuclear Forces Three nuclear forces and their Hierarchy. Three types of force act alongside each other inside a nucleus. The dominant one is the nuclear or ‘ strong ’ interaction which ensures the cohesion of the nucleus by pulling the various nucleons together, a force which is also responsible for the production of alpha radiation. Secondly, the electromagnetic repulsion among the like ...

That is one of the questions answered by Nuclear Forces, a riveting biography of Bethe ' s early life and development as both a scientist and a man of principle. As Silvan Schweber follows Bethe from his childhood in Germany, to laboratories in Italy and England, and on to Cornell University, he shows how these differing environments were reflected in the kind of physics Bethe produced.
