What is a piping system. A piping system conveys fluid from one location to another. Within a process plant, the locations are typically one or more equipment items (e.g., pumps, pressure vessels, heat exchangers, process heaters, etc.), or individual process plants that are within the boundary of a process facility.

Low molecular weight or volatile compounds usually require a 100µm polydimethylsiloxane (PDMS)-coated fiber. Larger molecular weight or semivolatile compounds are more effectively extracted with a 30µm PDMS fiber or a 7µm PDMS fiber. To extract very polar analytes from polar samples, use an 85µm polyacrylate-coated fiber.

Although capillary electrophoresis (CE) technology has evolved quickly from the research laboratory into practical application in numerous fields, many scientists still debate its merits. While the body of international CE literature continues to expand dramatically, experts still question whether it has provided the speed, resolving power, peak capacity, sensitivity, robustness, and cost-reduction promised by its pioneers. Responding to these criticisms, this third edition brings together cutting-edge researchers to demonstrate the utility of CE across a broad spectrum of disciplines
