Prolog Programming for Artificial Intelligence ...

It is used in artificial intelligence programming. Prolog is a declarative programming language. For example: While implementing the solution for a given problem, instead of specifying the ways to achieve a certain goal in a specific situation, user needs to specify about the situation (rules and facts) and the goal (query). After these stages, Prolog interpreter derives the solution.

Artificial Intelligence Programming in Prolog (AIPP)

Prolog has very strong historic ties with AI. In 1982, Japan started a very ambitious government project called the Fifth Generation Computer System (FGCS) with the goal to create a massively parallel computer, using concurrent logic programming as the software foundation of the project.
