Psychology research can usually be classified as one of three major types.

1. Causal or Experimental Research .

When most people think of scientific experimentation, research on cause and effect is most often brought to mind. Experiments on causal relationships investigate the effect of one or more variables on one or more outcome variables. This type of research also determines if one variable causes another variable to occur or change.

Research Methods | Simply Psychology

There are three main types of psychological research: Correlational research; Descriptive research; Experimental research; The following are common research designs and data collection methods: Archival research; Case study – Although case studies are often included in 'research methods' pages, they are actually not a single research method. Case study methodology involves using a body of different research methods (e.g. interview, observation, self-report questionnaire).
