It contains review articles on both the working mechanisms of natural materials and living organisms, and on the development of nature-inspired materials. It contains the following four topics: (1) geomaterials, (2) structural color by biomimetic approach, (3) biominerals and (4) adhesion and the interface of biological materials with the adherend.

First multi-year cumulation covers six years: 1965-70.

This book constitutes the refereed proceedings of the International Symposium on Surgery Simulation and Soft Tissue Modeling, IS4TM 2003, held in Juan-Les-Pins, France in June 2003. The 33 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 45 submissions. The papers are organized in topical sections on soft tissue models, haptic rendering, cardiac modeling, and patient specific simulators.

Includes entries for maps and atlases.
