Time Dependent Density

Functional Theory

Time-dependent density-functional theory (TDDFT) is a quantum mechanical theory used in physics and chemistry to investigate the properties and dynamics of many-body systems in the presence of time-dependent potentials, such as electric or magnetic fields. The effect of such fields on molecules and solids can be studied with TDDFT to extract features like excitation energies, frequency-dependent response properties, and

photoabsorption spectra.

Concepts And Applications Time-dependent density functional theory -

Wikipedia

Time-dependent density-functional theory (TDDFT) is a quantum mechanical framework which describes the dynamics of interacting electronic many-body systems formally exactly and in a computationally efficient manner. This book presents the concepts of TDDFT at the graduate level.

ethylene, and methane are reported. The local DFT (LDF) transition energies tend to be smaller than experimental values by 0.1–1.3 eV.

Time-Dependent Density Functional Theory Calculations of ...

Time-dependent density functional theory (TDDFT) has become a well-established technique for modelling excited state properties in molecular systems, and has been implemented in several quantum-chemistry codes.

CASTEP . . .

First-principles time-dependent density functional theory is employed to describe the electron dynamics. Temporal evolution of third-order nonlinear polarization is extracted from a few calculations of electron dynamics induced by pulsed electric fields with the same time profile but different amplitudes.

Nonlinear polarization evolution using time-dependent . . .

This theorem has since been extended to the time-dependent domain to develop time-dependent density functional theory (TDDFT),

Functional Theory Lecture

Notes In . . .

A density-functional formalism comparable to the theory of Hohenberg, Kohn and Sham is developed for electronic systems subject to time-dependent external fields. The formalism leads to a set of time-dependent Kohn-Sham equations which, in addition to the external potential, contain a time-dependent Hartree term and a local time-dependent exchange-correlation potential.
