The time-domain transient method in structural finite ...

Time-domain finite element method is applied to deal with the problem. The principle of virtual work is performed to formulate the nonlinear finite element governing equations. Nonlinear transient diffusion-elastic responses are investigated. Concentration-dependent elastic modulus and diffusivity affect the nonlinear responses greatly.

The purpose of this book is to provide an up-to-date introduction to the time-domain finite element methods for Maxwell's equations involving metamaterials. Since the first successful construction of a metamaterial with both negative permittivity and permeability in 2000, the study of metamaterials has attracted significant attention from researchers across many disciplines.

Time-Domain Finite Element Methods for Maxwell's Equations ...

The finite-element time-domain method for elastic band-structure calculations is presented in this paper. The method is based on discretizing the appropriate equations of motion by finite elements, applying Bloch boundary conditions to reduce the analysis to a single unit cell, and conducting a simulation using a standard time-integration scheme.

Finite element method - Wikipedia

Physics, PDEs, and Numerical Modeling Finite Element Method An Introduction to the Finite Element Method. The description of the laws of physics for space- and time-dependent problems are usually expressed in terms of partial differential equations (PDEs). For the vast majority of geometries and problems, these PDEs cannot be solved with analytical methods.

Detailed Explanation of the Finite Element Method (FEM)

In finite-difference time-domain method, "Yee lattice" is used to discretize Maxwell's equations in space. This scheme involves the placement of electric and magnetic fields on a staggered grid. Finite-difference time-domain (FDTD) or Yee's method (named after the Chinese American applied mathematician Kane S. Yee, born 1934) is a numerical analysis technique used for modeling computational electrodynamics (finding approximate solutions to the associated system of differential equations).
