Currently, rimegepant and ubrogepant have been developed for acute migraine treatment, while atogepant is studied for migraine prophylaxis. Of these drugs targeting CGRP signaling directly, eptinezumab, erenumab, fremanezumab, galcanezumab, rimegepant and ubrogepant have been approved for clinical use, while atogepant is in the last stage before approval.

Pharmacological treatment of migraine: CGRP and 5-HT---

Triptan medicines are a specific painkiller for migraine headaches. They're thought to work by reversing the changes in the brain that may cause migraine headaches. They cause the blood vessels around the brain to narrow (contract). This reverses the widening of blood vessels that's believed to be part of the migraine process.

Migraine—Treatment—NHS

The CGRP receptor can be targeted by the monoclonal antibody erenumab, or by small-molecule antagonists called gepants. Currently, rimegepant and ubrogepant have been developed for acute migraine treatment, while atogepant is studied for migraine prophylaxis.

Pharmacological treatment of migraine: CGRP and 5-HT---

Use ibuprofen 400mg or naproxen 500mg as a first line treatment option. Both ibuprofen and naproxen are effective for 2 hours pain relief as well as relieving migraine associated symptoms of nausea and photophobia. Ibuprofen is licensed for acute migraine treatment and the dose can be increased to 600mg if ineffective.

Guideline—Management of Migraine and Cluster Headache
